To whom it may concern

Poly-Tech were contracted by National Jet Systems for the resurfacing of our hangar floors in both Adelaide and Brisbane. (Both hangars having an area of 3,500sq. metres) The Adelaide hangar had to be completed while still in operation and Poly -Tech achieved this with minimal disruption to our work schedule.

Poly-Tech's flexibility to work with NJS was very much appreciated, as they were sometimes asked to work at odd hours of the day. National Jet Systems is committed to the OHS&W of their staff and also have a responsibility to the high level of security issues that affect the airline industry. Poly-Tech demonstrated this same commitment while working on our sites, making our association an enjoyable one.

Since the completion of both hangar floors (late 2004') National Jet Systems have been very impressed with both the finish and the chemical resistance of both floors and this is due to Poly-Tech's sound knowledge of the preparation and product required to achieve this.

National Jet Systems would have no hesitation in recommending Poly-Tech as a contractor to any organisation looking to have any floor treatment done as mentioned.

Jeff Bishop
