

Project Case Study

Project

Port Augusta Court House

Port Augusta

SA

Project Summary

Substrate

Concrete Tiles

Surface Preparation

Gritblasting

System

Decorative
Concrete Profiling

Project Description

The design of a new court complex for the region needed to take into account the complexities and importance of the place, the need to service a large number of matters across a wide range of jurisdictions and the socio-spatial needs of different client groups and organizations.

With many of the users identifying with Aboriginal cultures, there was an opportunity to move beyond traditional court architecture to integrating the traditions and needs of various Aboriginal peoples into the design. In order to achieve this, the design team consulted closely with the Indigenous and non-Indigenous stakeholders.

The application of Poly-Tech's specialised blasting to the court floors enabled this vision.
