

Project Case Study

Project

T & R Pastoral
Lobethal & Murray Bridge
SA

Project Summary

Substrate

Concrete
Pre Cast Concrete Walls

Surface Preparation

Concrete Grinding
Patching
Acid Wash

Systems

100% Solids Epoxy
Chop Strand 450 Fibreglass
White FlowCoat
Polyurethane
R12 Non Slip

Project Description

T&R Pastoral is one of Australia's premium livestock handlers, full-service abattoir and meat-processor.

They have the capacity to process 700 cattle as well as 8,000 sheep and lambs per day. This busy schedule means they have to adhere to strict AQIS & HACCP-based quality assurance programs that pass the most stringent standards demanded by any country in the world.

Poly-Tech is a key maintenance partner with T&R in delivering these quality assurance objectives.

Livestock processing takes a heavy toll on fixed assets such as flooring and walls so various systems are specified in order to achieve long term protection. Blood, use of corrosive chemicals, constant moisture, a range of different temperatures and high pressure cleaning are just some of the day to day activities carried out at T&R.

Poly-Tech have consistently provided T&R Pastoral with a variety of protection options which suited the individual requirements of these various environments. From the need to supply a high heat resistant polyurethane to key wash down areas, high grade non slip flooring to walkways and stairwells ensuring OHS objectives, heavy duty epoxy topping to main slaughter and production areas and fibre glassing walls around the staircases and staff hygiene wash down areas. All these systems ensure T&R's floors remain in service, are safe and are hygienic for customers.

In all cases our industry experience and customer focus has continued to prove invaluable as we support the expansion and brand awareness of T&R Pastoral.
