

Project Case Study

Project

Epoxy Walkways and Line Marking

Applicable to every workplace

Project Summary

Substrate

Concrete or
Bitumen

Surface Preparation

Dustless diamond grinding,
Captive Track blasting or
Steam Cleaning

System

High Solids epoxy coatings
Water based epoxy

Project Description

Highly visible and long lasting epoxy coated walkways and line marking is the time and cost effective solution to indicate every facilities safe traffic management plan.

The prevention of workplace OH & S incidences continues to be paramount for all industries as employers aim to ensure a safe and injury free environment. A business's ability to highlight designated pedestrian and vehicular traffic areas is an essential component in eliminating accidents involving machinery and vehicles

Poly-Tech's great experience with concrete preparation and epoxy application in all industries gives great assurance that your project will be completed to budget, specifications and any strict time constraints to minimise any thought of a long shut down time

Epoxy line marking is the cost effective solution in comparison to other methods. Its long term durability will provide a system that will not need an annual reapplication – thus saving time and money in coordinating the same project every year!

Walkways and lines can be applied to various substrates either in conjunction with other protective floor coatings or as a stand alone form of identification. The multitude of colours available provides contrasting areas to highlight safe areas, no go zones or any other traffic management requirements.

Another Poly Tech solution.
